

## iCat® Revolving Door

iCat® Revolving Door is the primary choice of those who consider function and aesthetics together in architecture. It is preferred with its elegant appearance, advanced technology in production, fully automatic or semi-automatic and manual options.

- It is an ideal solution to keep the temperature level inside the building constant.
- Effectively manages the density of your entrances.
- Fully automatic, semi-automatic and manual options with the possibility of production according to the project
- The product is equipped with emergency battery backups and fire alarm connection.

### Technological, Safe, Economical

With its high-tech operator and motor, it meets all the requirements of modern standards. Combined with cutting-edge activation and safety sensors and the system's self-monitoring processor, iCat revolving door systems are safe, robust and energy-efficient.

### Your Dream Appearance with a Variety of Materials

The differences in body materials provide customers with a rich choice in the selection phase. Mainly stainless steel (304 and 316, matt and polished), copper, brass and bronze coatings are available as cladding on the aluminum body.

### Economic Models and Variation of Leaf

iCat revolving doors are produced in 3 different types: 2-leaf, 3-leaf and 4-leaf. iCat Revolving Doors can respond to the special requests of architectural offices and designers as well as projects looking for an economical and stylish entrance solution.
