

Always safe passage with the patented RSA anti-panic system in European standards...

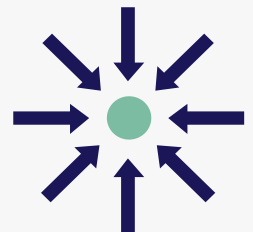

RSA

iCat® Anti-Panic Automatic Door

In case pedestrians push the door leaf outward with a force of 4kg in case of emergency, the sliding leaf system opens towards the exit direction just like hinged doors and turns into a panic pedestrian door, providing comfortable and fast passage.

- Maximum clear passage area in case of emergency.
- Break-out feature on movable and fixed leaves.
- 1 movable, 2 movable, 1 movable + 1 semi-fixed and 2 movable + 2 semi-fixed break-outs.
- Integrated design with the superior features of the iCat A110 mechanism.

Ideal Solution for Emergencies

When the door leaves are directly intervened, they can be fully opened across the passage width with the help of a special accessory system placed in the leaf profiles.

Complete Equipped for Anti-Panic Capability

Photocells, magnetic microswitches and all other systems to stop the unexpected operations of the automation as soon as the break-out feature of the automatic door is activated are included in the product box together with complementary accessories.

Wide Area of Use

Provides fast and safe evacuation for collective living spaces such as schools, business centers, hospitals, factories, shopping malls, theaters, cinemas, apartment buildings
