

iCat® Fire Resistant Rolling Steel Doors

iCat® Fire Resistance Rolling Steel Doors are the perfect solution for the safety of people while ensuring a safe evacuation by preventing the spread of fire.

- Safe evacuation and isolation
- Resistant to high temperatures
- Easy to use and maintain
- Automation and quick closing
- Professional installation

The Perfect Solution for Fire Protection

It prevents the spread of fire and provides a safe time for evacuation. It is resistant to high temperatures and flames. When a fire breaks out, it prevents the spread of fumes and heat, allowing people to evacuate safely.

Automation With Fire Automation Systems

iCat® Fire Resistant Rolling Steel Door closes automatically depending on the fire alarm system. It prevents the spread of smoke and ensures safety during evacuation.

The Right Solution Against Fire in Different Areas

It provides life and property safety in industrial facilities with high fire risk such as chemical factories, Dye factories, automotive factories, material warehouses, parking lots and tunnels.
