

The right solution for industrial plants looking for high performance in high traffic, variable and extreme weather conditions.

iCat® High Speed PVC Door

"RSA iCat Fast PVC Door provides superior efficiency in your production facilities compared to its competitors by minimizing cumbersome operation, time wastage, unwanted air currents, energy losses, dust pollution and hygiene problems with its performance of opening and closing hundreds of times a day."

- Custom-designed control panel with speed drive provides ease of use.
- Gearmotor and brake system are specially developed for very intensive use.
- Switch system provides sensitivity at door opening/closing points.
- Prismatic safety photocell system minimizes the risk of impact when the door is in motion.

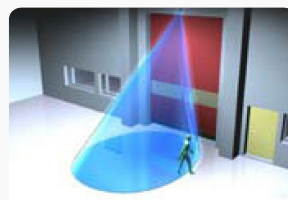

Reliable Alternative for Clean Rooms

With its feature of minimizing the permeability between the two environments, it is a reliable alternative to Hermetic Doors as a Clean Room door.

Control panel with Speed Drive

iCat Fast PVC Door provides a smooth stop at opening and closing with its specially designed control panel speed drive (inverter) and produces solutions suitable for your needs with adjustable speed.

State of the Art Industrial Door Radar

The high-security industrial radar, which consumes minimum energy and can distinguish between pedestrians and vehicles thanks to its special software, offers mounting up to 7 meters.
