

In addition to its fast and comfortable use, it offers superior patient privacy with its premium features.

RSA

iCat® Intensive Care Room Door (ICU)

When establishing a new intensive care unit, physical features and infrastructure must be meticulously planned. As RSA, we offer intensive care room doors, which have been used in America and Europe for many years, to our country's healthcare institutions at the same standards.

- Fully automatic and manually available.
- Sliding folding door leaves without any connection to the floor.
- Maximized clear door opening for stretcher entry and exit.
- Easy, fast and comfortable use by healthcare personnel.

Seamless and Comfortable Passage

Although it works like 1 movable and 1 semi-fixed antipanic leaf, unlike iCat ICU doors, there is no guide rail on the floor, which makes stretcher passage difficult. Thus, it provides uninterrupted and comfortable service for patients and hospital staff.

Ultimate Patient Privacy

With specially designed sash profiles, it offers superior patient privacy with 4+4 laminated glass, electric darkening glass and tempered blinds between two glasses.

Contactless and Safe

Fully automatic iCat A110 photocell door mechanism with hand sensor, card and encrypted access accessories are available.
